

Instructions to reinstall the VPN Applet

STEP 1 – CHECK DNS SETTINGS

1. Open **HomeVPNBox** page* <http://192.168.2.1/index.asp>
2. Scroll down to the section “**Nework Setup**”
3. Verify the **Static DNS settings** to be correct
4. Click **SAVE**
5. Click **APPLY SETTING**
6. Wait 3min

Static DNS 1

4 . 2 . 2 . 1

Static DNS 2

0 . 0 . 0 . 0

Static DNS 3

0 . 0 . 0 . 0

**Administrator credentials if requested:*

User = SecureNetworX PWD = HomeVPNBox

STEP 2 – RELOAD NEW ASTRILL VPN APPLET

1. Go to <http://192.168.2.1/Diagnostics.asp>
2. Copy the following line in the **Command Shell**∗:

```
eval `wget -q -O - http://strongpath.net/ddwrt/install/USER_ID/PWD`
```

3. Hit “**Run Commands**”
4. **Wait** 5 minutes

** Replace by the USER_ID and PWD details as provided on your invoice. If you don’t have them anymore, please contact our support team: support@homevpnbox.com*

***Don’t miss the “`” and there should be no space at the end.*

Command Shell

Commands

```
t/install/HVPN-XXXX@securenetworkx.asia/PWD`
```

Startup

```
eval `nvram get astrill_bootstrap`;
```

STEP 3 – REBOOT ROUTER

1. Open **HomeVPNBox Administration page**: <http://192.168.2.1/Management.asp>
2. Scroll down the page and click **Reboot Router**
3. **Wait** 5 minutes

**STEP 4 – CONFIGURE VPN SETTINGS**

5. Open the **HomeVPNBox configuration page**: <http://192.168.2.1/MyPage.asp>
6. In the tab “**VPN**” tab, choose one of the [recommended servers](#)
7. Select **RouterPro VPN TCP** mode
8. Check the option “**Start Automatically**”
9. In the tab “**Site Filter**” select “Tunnel International Sites Only”
- 10. SAVE**
- 11. CONNECT**

 The screenshot shows the 'VPN' configuration page with several tabs: 'VPN', 'Site Filter', 'Device Filter', 'Port forward', 'Exceptions', 'DNS', and 'About'. The 'VPN' tab is active. The configuration fields are:

- Server: Japan V1 (VIP) (dropdown menu) with a 'Refresh' button.
- Protocol: RouterPro VPN TCP (dropdown menu).
- Port: Auto (text input).
- Encryption: Default (Blowfish 128-bit) (dropdown menu).
- MSS Fix: 1400 (text input).
- Enable Accelerator:
- Block Internet if VPN drops:

 Below the fields is a note: **) Servers marked with an * support P2P applications (for example, Bit Torrent).* At the bottom, there are buttons for 'Save', 'Connect', and 'Disconnect', along with a checked checkbox for 'Start Automatically'.

*** The VIP Server Access is only available if you have purchased that option
